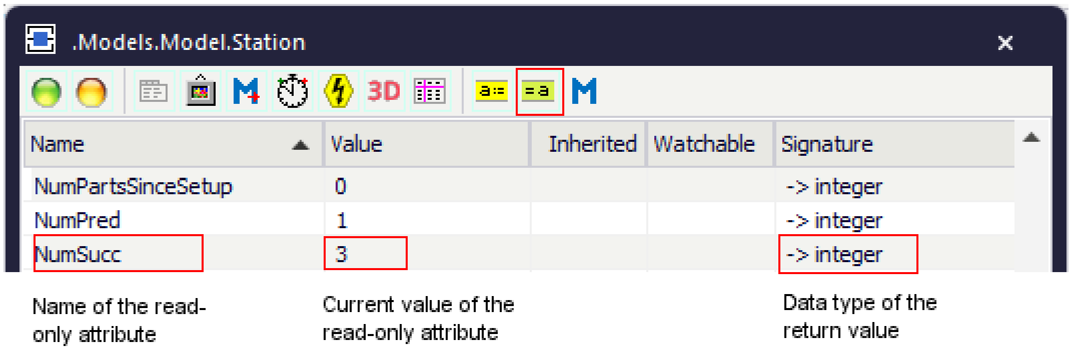
To view all of the *methods*, *read-only attributes*, and *attributes* of the object, open the window **Show Attributes and Methods**. The figure below illustrates the information using the example of the object *Station*.



- Select **Show Attributes and Methods** on the context menu of the **Class Library** to show the *methods*, *read-only attributes*, and *attributes* of the selected **Class [general description]**.
- Press the **F8** key or click **Show Attributes and Methods** on the **Home** ribbon tab of the *Frame* into which you inserted an instance to show the *methods*, *read-only attributes*, and *attributes* of the selected **Instance [general description]**.

To query the value of a *read-only attribute*, you might, for example, type:

```
print MyComment.UUID
```

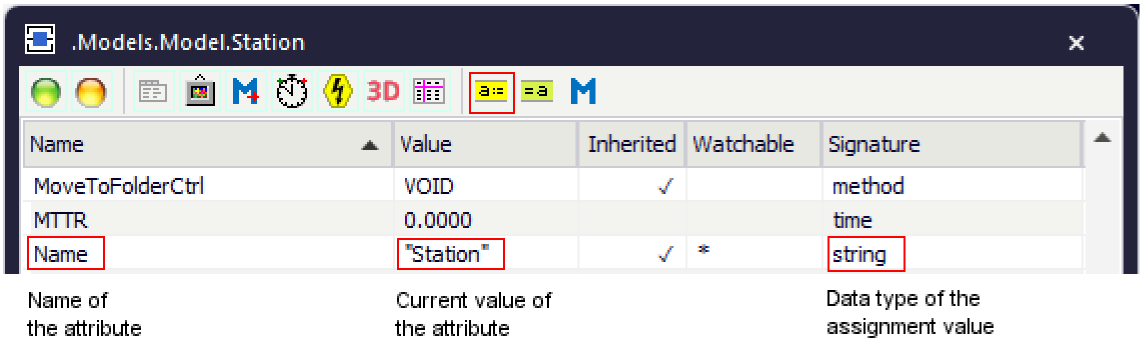
Attributes of the Comment

_Attributes of the Comment

The *Comment* provides:

- The *attributes* listed in the table of contents to the left.
- The **Attributes of All Objects**.

To view all of the *methods*, *read-only attributes*, and *attributes* of the object, open the window **Show Attributes and Methods**. The figure below illustrates the information using the example of the object *Station*.



- Select **Show Attributes and Methods** on the context menu of the **Class Library** to show the *methods*, *read-only attributes*, and *attributes* of the selected **Class [general description]**.
- Press the **F8** key or click **Show Attributes and Methods** on the **Home** ribbon tab of the *Frame* into which you inserted an instance to show the *methods*, *read-only attributes*, and *attributes* of the selected **Instance [general description]**.

You can set the value of an attribute and you can get its value, either with the check boxes, the text boxes and drop-down lists in the dialog windows or by assigning values to the respective attributes.

- To **set the value** of an attribute, you might, for example, type:

```
MyComment.Color := makeRGBColor(255,0,0)
```

- To **get the value** of an attribute, you might, for example, type:

```
print MyComment.font
posit := Station.Cont.XPos
```

BackgroundColor [SimTalk] - Comment

Sets the **Background Color** of the *Comment* designated by <Path> which you inserted into a *Frame*.

Remarks

Set the RGB values of the color with the method *makeRGBValue*.

Type

Attribute

Syntax

```
<Path>.BackgroundColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

Example

```
MyComment.BackgroundColor := makeRGBValue(100,100,100)
MyComment.BackgroundColor := 6579300 // is the same as the color above
```

Background Color [drop-down list] - Comment

Color [SimTalk] - Comment

Sets the **Color** with which *Plant Simulation* displays the text of the *Comment* designated by <Path> in the *Frame*.

Remarks

Set the RGB values of the color with the method *makeRGBValue*.

Type

Attribute

Syntax

```
<Path>.Color:integer
```

Assignment Value

You can assign a value of data type *integer*.

Example

```
MyComment.Color := makeRGBValue(255,0,0)
```

Font Color [Comment]

Cont [SimTalk] - Comment

Sets the **Contents** of the text box on the tab **Comment** of the *Comment* designated by <Path>.

Remarks

Enter a backslash \ to insert a line break.

Type

Attribute

Syntax

```
<Path>.Cont:string
```

Assignment Value

You can assign a value of data type *string*.

Example

```
MyComment.Cont := "Species: Aardvark\
                 amount: 45 \
                 weight: 780kg" // assign a multi-line comment
```

Tab Comment [Comment]

Font [SimTalk] - Comment

Sets the **Font Size** with which *Plant Simulation* displays the *Comment* designated by <Path> in the *Frame*.

Type

Attribute

Syntax

```
<Path>.Font:integer
```

Assignment Value

You can assign a value of data type *integer*.

You can specify 1 for **Small**, 2 for **Medium**, 3 for **Large**, 4 for **Extra Large**.

Example

```
if MyComment.Font < 4
   MyComment.Font := MyComment.Font + 1
```

Font Size [drop-down list] - Comment

SaveAsRichedit [SimTalk]

Makes the *Comment* designated by <Path> save the contents of the text box in rich-text format (`true`) or not (`false`).

Remarks

Rich-text preserves all the formatting properties you applied.

Type

Attribute

Syntax

```
<Path>.SaveAsRichedit:boolean
```

Assignment Value

You can assign a value of data type *boolean*.

Example

```
MyComment.SaveAsRichedit := false
```

See also

Save the Content in Rich-text Format

Text [SimTalk] - Comment

Sets the comment text that the *Comment* designated by <Path> shows in the *Frame*.

Remarks

The text may also contain blanks and/or special characters.

Type

Attribute

Syntax

```
<Path>.Text:string
```

Assignment Value

You can assign a value of data type *string*.

Example

```
MyComment.Text := "Buffer utilization in %"
```

See also

Text [text box] - Comment

Transparent [SimTalk] - Comment

Makes the background of the object designated by <Path> transparent in the *Frame* (`true`) or not transparent (`false`).

Type

Attribute

Syntax

```
<Path>.Transparent:boolean
```

Assignment Value

You can assign a value of data type *boolean*.

Specify `true` to show the *Comment* in the color that you selected as the **Font Color** on the background of the *Frame*.

Specify `false` to show the space around the text in white.

Example

```
MyComment.Transparent := false
```

Display

Display [object]

Use the object *Display* for presenting current data and results of the simulation run. The *Display* shows a value, for example of an attribute, at all times throughout the entire simulation run.
