Accessing the Appearance of the Objects

__Accessing the Appearance of Objects and MUs

SimTalk provides the *attributes* and *methods* listed in the table of contents to the left for the object material of *objects* and *MUs* in *3D*.

Objects do not provide an object material:

- If they have object-specific appearance settings, such as the *length-oriented objects* and the *Store*.
- If they are used for connecting other objects, such as the *Connector*, the *Interface*, and the *Marker*.
- If they are used for displaying text or values, or for selecting a setting, such as *Comment, Variable, Display, Button, DropDownList, Checkbox, Chart, Tank* and *Mixer*.

Plant Simulation applies the attributes to all graphics of the specified object for which no material of its own is defined, for example

- The T-Shirt of the *Worker*.
- The body of the *Transporter*.
- The entire graphic of the *Container* and the *Part*.
- The blue graphics of the point-oriented objects, such as the *Station*, the *Buffer*, etc.
- The light gray plate under the icon of logical objects, such as the information flow objects *Method*, *DataTable*, etc, and of the user interface objects *SankeyDiagram*, *CostAnalyzer*, etc.

Appearance of the Length-oriented Objects

Appearance of the Store

_3D.MaterialActive [SimTalk]

Sets if the object designated by <Path> has an object-wide material (`true`) or not (`false`).

Remarks

Also sets if the *MU* designated by <MU-Path> has an object-wide material (`true`) or not (`false`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialActive:boolean
<MU-Path>._3D.MaterialActive:boolean
```

Assignment Value

You can assign a value of data type *boolean*.

Example

```
MyStation._3D.MaterialActive := true
MyPortioner._3D.MaterialActive := false
.MUs.Part._3D.MaterialActive := true
```

See also

Edit 3D Properties [dialog] > Appearance of Objects and MUs > Material Active [check box] - MUs	_3D.MaterialEmissiveColor [SimTalk]
makeRGBValue [SimTalk]	_3D.MaterialShininess [SimTalk]
_3D.MaterialAmbientColor [SimTalk]	_3D.MaterialSpecularColor [SimTalk]
_3D.MaterialDiffuseColor [SimTalk]	_3D.MaterialTransparency [SimTalk]

_3D.MaterialAmbientColor [SimTalk]

Sets the ambient color of the graphic of the object designated by <Path>.

Remarks

Also sets the ambient color of the graphic of the *MU* designated by <MU-Path>.

Note

When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialAmbientColor:integer
<MU-Path>._3D.MaterialAmbientColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

You will usually set the color with the method **makeRGBValue [SimTalk]**.

Example

```
MyStation._3D.MaterialAmbientColor := makeRGBValue(0,0,255)
MyPortioner._3D.MaterialAmbientColor := makeRGBValue(255,0,0)
.MUs.Part._3D.MaterialAmbientColor := makeRGBValue(0,0,255)
```

_3D.MaterialActive [SimTalk]	_3D.MaterialSpecularColor [SimTalk]
_3D.MaterialDiffuseColor [SimTalk]	_3D.MaterialTransparency [SimTalk]

_3D.MaterialDiffuseColor [SimTalk]

Sets the diffuse color of the graphic of the object designated by <Path>.

Remarks

Also sets the diffuse color of the graphic of the *MU* designated by <MU-Path>.

> **Note**
> When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialDiffuseColor:integer
<MU-Path>._3D.MaterialDiffuseColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

You will usually set the color with the method **makeRGBValue [SimTalk]**.

Example

```
MyStation._3D.MaterialDiffuseColor := makeRGBValue(0,0,255)
MyPortioner._3D.MaterialDiffuseColor := makeRGBValue(255,0,0)
.MUs.Part._3D.MaterialDiffuseColor := makeRGBValue(255,0,0)
```

_3D.MaterialAmbientColor [SimTalk]	_3D.MaterialTransparency [SimTalk]

_3D.MaterialEmissiveColor [SimTalk]

Sets the emissive color of the graphic of the object designated by <Path>.

Remarks

Also sets the emissive color of the graphic of the *MU* designated by <MU-Path>.

> **Note**
>
> When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialEmissiveColor:integer
<MU-Path>._3D.MaterialEmissiveColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

You will usually set the color with the method **makeRGBValue [SimTalk]**.

Example

```
MyStation._3D.MaterialEmissiveColor := makeRGBValue(0,0,255)
MyPortioner._3D.MaterialEmissiveColor := makeRGBValue(255,0,0)
.MUs.Part._3D.MaterialEmissiveColor := makeRGBValue(0,255,0)
```

_3D.MaterialActive [SimTalk]	_3D.MaterialSpecularColor [SimTalk]
_3D.MaterialAmbientColor [SimTalk]	_3D.MaterialTransparency [SimTalk]

_3D.MaterialShininess [SimTalk]

Sets the shininess of the graphic of the object designated by <Path>.

Remarks

Also sets the shininess of the graphic of the *MU* designated by <MU-Path>.

> **Note**
>
> When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialShininess:real
<MU-Path>._3D.MaterialShininess:real
```

Assignment Value

You can assign a value of data type *real* between `0` and `1`.

Example

```
MyStation._3D.MaterialShininess := 0.7
MyPortioner._3D.MaterialShininess := 0.8
.MUs.Part._3D.MaterialShininess := 0.9
```

_3D.MaterialSpecularColor [SimTalk]

Sets the specular color of the graphic of the object designated by <Path>.

Remarks

Also sets the specular color of the graphic of the *MU* designated by <MU-Path>.

> **Note**
> When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialSpecularColor:integer
<MU-Path>._3D.MaterialSpecularColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

You will usually set the color with the method **makeRGBValue [SimTalk]**.

Example

```
MyStation._3D.MaterialSpecularColor := makeRGBValue(0,255,0)
MyPortioner._3D.MaterialSpecularColor := makeRGBValue(0,0,255)
.MUs.Part._3D.MaterialSpecularColor := makeRGBValue(0,255,0)
```

_3D.MaterialAmbientColor [SimTalk]	_3D.MaterialTransparency [SimTalk]

_3D.MaterialTransparency [SimTalk]

Sets the transparency of the graphic of the object designated by <Path>.

Remarks

Also sets the transparency of the graphic of the *MU* designated by <MU-Path>.

> **Note**
>
> When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

Type

Attribute

Syntax

```
<Path>._3D.MaterialTransparency:real
<MU-Path>._3D.MaterialTransparency:real
```

Assignment Value

You can assign a value of data type *real* between `0` and `1`.

Example

```
MyStation._3D.MaterialTransparency := 0.75
MyPortioner._3D.MaterialTransparency := 0.75
.MUs.Part._3D.MaterialTransparency := 0.85
```

_3D.ShowSafetyZones [SimTalk]

Shows the defined **safety zones** of the *Transporter* designated by <Path> (`true`) or hides them (`false`).

Type

Attribute

Syntax

```
<Path>._3D.ShowSafetyZones:boolean
```

Assignment Value

You can assign a value of data type *boolean*.

Example

```
Station._3D.ShowSafetyZones := true
```

Accessing the Appearance of the Store

__Accessing the Appearance of the Store

SimTalk provides the *attributes* listed in the table of contents to the left for setting the appearance of the *Store* in 3D.

See also

Edit 3D Properties [dialog] > **Appearance of the Store**

_3D.Dimensions [SimTalk] - Store

Sets the dimensions of the storage area of the *Store* designated by <Path>.

Remarks

For the *dynamic types* these dimensions designate the slot dimensions.

For the *non-dynamic types* these dimensions designate the overall dimensions of the *Store*.

Type

Attribute

Syntax

```
<Path>._3D.Dimensions:length[3]
```

Assignment Value

You can assign an *array* of data type *length* with three values.

They designate the **X-dimension**/width, the **Y-dimension**/depth, and the **Z-dimension**/height of the storage area.

Example

```
MyStore._3D.Dimensions := [2, 2, 0.01]
```

See also

Edit 3D Properties [dialog] > **Store** > **X [text box] - Store**, **Y [text box] - Store**, **Z [text box] - Store**

_3D.Dimensions [SimTalk] - simulation object

X [SimTalk] - array

Y [SimTalk] - array

Z [SimTalk] - array

_3D.FloorThickness [SimTalk]

Sets the **Thickness** of the base plate below the floor space of the *Store* designated by <Path> for the **Store Type > Floorspace (dynamic)**.

Remarks

Also sets the **Thickness** of the individual shelves of the *Store* designated by <Path> for the **Store Type > Rack with round/square posts (dynamic)**.

Type

Attribute

Syntax

```
<Path>._3D.FloorThickness:any
```

Assignment Value

You can assign a value of data type *any*.

Specify `void` to use the default thickness.

Example

```
MyStore._3D.FloorThickness := 0.24
```

See also

_3D.StoreType [SimTalk]

Edit 3D Properties [dialog] > **Appearance of the Store** > **Floor Thickness**

Edit 3D Properties [dialog] > **Appearance of the Store** > **Board Thickness**

_3D.Gap [SimTalk]

Sets the **Gap**, i.e., the distance between the individual rack bays for the *dynamic store types* of the *Store* designated by <Path>.

Remarks

> **Note**
>
> The attribute only applies to the *dynamic store types*.

For a dynamic rack, *Plant Simulation* implicitly uses a gap of 3 cm.

For a dynamic floor space, *Plant Simulation* uses an effective gap of 0 cm which also includes the borderline.

Type

Attribute

Syntax

```
<Path>._3D.Gap:any
```

Assignment Value

You can assign a value of data type *any*.

You can only assign a value greater than or equal to 0.

Specify `void` to use no gap.

Examples

```
.Models.MyStore._3D.Gap := void -- no gap
```

```
Store3._3D.StoreType := "Rack with round posts (dynamic)"
Store3._3D.Gap := 0.1
Store3._3D.FloorThickness := 0.15
Store3._3D.GroundClearance := 0.3
```

See also

Edit 3D Properties [dialog] > **Appearance of the Store** > **Gap [rack]**

Edit 3D Properties [dialog] > **Appearance of the Store** > **Type [drop-down list] - Store**

_3D.GroundClearance [SimTalk]

Sets the distance between the lower edge of the lowest shelf and the floor on which the rack of the *Store* designated by <Path> stands for the **Store Type > Rack with round/square posts (dynamic)**.

Type

Attribute

Syntax

```
<Path>._3D.GroundClearance:any
```

Assignment Value

You can assign a value of data type *any*.

Specify `void` to use the default ground clearance.

Specify `0` to make the lowest shelf rest flat on the floor.

Example

```
Store3._3D.StoreType := "Rack with round posts (dynamic)"
Store3._3D.Gap := 0.1
Store3._3D.FloorThickness := 0.15
Store3._3D.GroundClearance := 0.3
```

Edit 3D Properties [dialog] > **Appearance of the Store** > **Board Thickness**

_3D.OriginX [SimTalk]

Sets the origin of the automatically created graphic and of the **MU animation** of the *Store* designated by <Path> in the **X-Direction**.

Remarks

Origin X	Origin Y	Capacity 3 times 3	Capacity 4 times 3
Center	**Bottom**		Center	**Top**		Center default setting	**Center** default setting		Left	**Bottom**		
Origin X	Origin Y	Capacity 3 times 3	Capacity 4 times 3
Left	**Top**		Left	**Center**		Right	**Bottom**		Right	**Top**		Right	**Center**		
Type

Attribute

Syntax

```
<Path>._3D.OriginX:string
```

Assignment Value

You can assign a value of data type *string*.

You can specify `"Left"`, `"Center"`, or `"Right"`.

Example

```
Store3._3D.OriginX := "Left"
```

See also

_3D.OriginY [SimTalk]

Edit 3D Properties [dialog] > **Appearance of the Store** > **Origin [graphic]**

_3D.OriginY [SimTalk]

Sets the origin of the automatically created graphic and of the **MU animation** of the *Store* designated by <Path> in the **Y-Direction**.

Remarks

Origin X	Origin Y	Capacity 3 times 3	Capacity 4 times 3
Center	**Bottom**		Center	**Top**		Center default setting	**Center** default setting		Left	**Bottom**		
Origin X	Origin Y	Capacity 3 times 3	Capacity 4 times 3
Left	**Top**		Left	**Center**		Right	**Bottom**		Right	**Top**		Right	**Center**		
Type

Attribute

Syntax

```
<Path>._3D.OriginY:string
```

Assignment Value

You can assign a value of data type *string*.

You can specify "Top", "Center", or "Bottom".

Example

```
Store3._3D.OriginY := "Top"
```

_3D.PostMaterialActive [SimTalk]

Activates (`true`) or deactivates (`false`) the material of the posts of the automatic graphics of the *Store* designated by <Path>.

Type

Attribute

Syntax

```
<Path>._3D.PostMaterialActive:boolean
```

Assignment Value

You can assign a value of data type *boolean*.

Example

```
MyStore._3D.PostMaterialActive := true
```

See also

Edit 3D Properties [dialog] > **Appearance of the Store** > **Material [tab]**

_3D.PostMaterialAmbientColor [SimTalk]

Sets the ambient color of the automatic graphics of the posts of the *Store* designated by <Path>.

Remarks

When assigning a value to the attribute, we automatically set the material to active (`MaterialActive := true`).

> **Note**
> You can only access the attribute if the material is active.

Type

Attribute

Syntax

```
<Path>._3D.PostMaterialAmbientColor:integer
```

Assignment Value

You can assign a value of data type *integer*.

You will usually set the color with the method **makeRGBValue [SimTalk]**.

Example

```
MyStore._3D.PostMaterialAmbientColor := makeRGBValue(255,0,0)
```
