

- The expression `<Path>` designates the path of the object to which the *method* applies.
- The signature of the method, consisting of the identifier and the data type of the parameter, is listed in parentheses. The expression `(Parameter:string)`, for example, designates a parameter of data type *string*. Instead of a constant value, you can also use a variable of the required type or a *method* that returns the required data type.

Note

Make sure to enter the parentheses for expressions within parentheses (...). Not entering them may lead to unexpected results and open the *Debugger*.

Optional parameters are listed within brackets. The expression `[,Parameter:boolean]`, for example, means that you can, but do not have to enter the *boolean* parameter.

If a parameter has a default value, the signature shows the default value after the parameter, `:= false` in the example above.

If the *method* has a return value, the signature shows its data type after the arrow `->`, `-> boolean` in the example above.

Read-Only Attributes of the FootPath

Read-Only Attributes of the FootPath

The *Exporter* provides the [_Read-Only Attributes of All Objects](#).

You can query the values of the *read-only attributes*, but you cannot set them as *Plant Simulation* computes the value for the point-in-time at which you query it. In most cases a *read-only attribute* corresponds to an unavailable dialog item on one of the tabs of the object, for example on the tab **Statistics**.

To view all of the *methods*, *read-only attributes*, and *attributes* of the object, open the window [Show Attributes and Methods](#). The figure below illustrates the information using the example of the object *Station*.

Name	Value	Inherited	Watchable	Signature
NumPartsSinceSetup	0			-> integer
NumPred	1			-> integer
NumSucc	3			-> integer

Name of the read-only attribute Current value of the read-only attribute Data type of the return value

- Select **Show Attributes and Methods** on the context menu of the **Class Library** to show the *methods*, *read-only attributes*, and *attributes* of the selected [Class \[general description\]](#).
