## User Interface Objects

### Display and User Interface Objects

*Plant Simulation* provides **display objects** to show the results of the simulation runs and **user interface objects** prompting input from the user of the simulation model.

You can:

- Use the object **Button**  for showing a button in the *Frame*. When you click the button, it executes the action which you programmed in a control.

- Use the object **Chart**  for presenting current data and results of the simulation run.
- Use the object **Checkbox**  for toggling between the states on and off, for toggling operating modes, etc.
- Use the object **Comment**  for showing explanatory notes which you added to your simulation model.
- Use the object **CostAnalyzer**  for analyzing costs that the individual *machines* and the *Worker* cause.
- Use the object **Dialog**  for designing a dialog box for an object which is similar to the built-in dialog boxes.
- Use the object **Display**  for presenting current data and results of the simulation run.
- Use the object **DropDownList**  for showing a drop-down list in the *Frame*. When you select one of the items, it executes the action which you programmed in the control.
- Use the object **GanttChart**  for showing the chronological sequence of activities as bars on the time axis.
- Use the object **HtmlReport**  for presenting current data and results of the simulation run in a report that you can share with co-workers and customers.
- Use the object **SankeyDiagram**  for visualizing the *Sankey flows* of parts as well as *Sankey flows* of *Workers*, who walk freely within the area or walk on *FootPaths*.

## Comment

### Comment [object]

Use the object *Comment* for showing explanatory notes which you added to your simulation model.

#### Image

#### Description

A comment helps you and your colleagues to better understand the intentions behind your model and how it is supposed to work.

You can access it like you do any other object, be aware though that the *Comment* usually is not involved in the simulation itself. Select **Options > Show Comments** on the **View** ribbon tab of the *Frame* or click  to display all *Comment* objects, which you inserted into that *Frame*. *Plant Simulation* displays the text in the *Frame* window which you entered under **Display > Text**.
